SITE WEAR

**Modesty/Scrub Garments from UniTech,
the Nuclear Garment Service Leader.**

Nuclear facilities today utilize comprehensive procedures to maintain the strict controls required for RCA activities. Besides assuring radiological protection, management must also work to reduce costs. *UniTech's Site Wear Program* provides an excellent means to accomplish both.

Site Wear is *UniTech's* solution for modesty/scrub garment requirements at your facility. Personnel readily adopt the comfortable scrub-style shirts and pants for use in the RCA, avoiding any chance of contaminating or otherwise damaging their personal clothing. When donning protective clothing for RCA access, *Site Wear* doubles as an under-PC modesty. Upon RCA exit, personnel can quickly move on with their duties, saving a trip back to the changing room.

- ★ **Comfortable** - gains immediate user acceptance.
- ★ **Protective** - 3 & 5 oz. weights provide barrier and minimize beta skin dose.
- ★ **Give a uniform look and image for workers at your facility.**
- ★ **Wide range of sizes with color coding and markings for size ID.**
- ★ **Long and short sleeve unisex shirt styles.**
- ★ **Significant time savings during exit and re-entry.**
- ★ **Available for direct sale and UniTech leasing.**

Labor Savings:

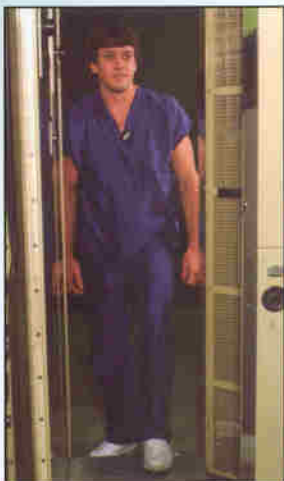

- Exit RCA and go on the control side duties - it's unnecessary to return to the change room for re-dress!
- In fact, this labor savings alone can **offset an entire program's cost.**
- As a walk-around garment and under-PC modesty, **Site Wear** significantly quickens dress-out.
- Garments have several custom features and are the coolest undergarment available.

Minimize Liability:

- Eliminates personnel clothing contaminations.
- Significantly reduces skin contaminations.
- Automated radiological monitoring of **Site Wear** by *UniTech* can assure compliance with I&E circular 81-07.

The Perfect Modesty:

- Comfortable fabrics, convenient design, wide size range, and long life make **Site Wear** your best choice.
