Workplace safety is paramount to UniTech products and services. Inside the mobile supply store, rolling staircases help customers safely reach products on upper shelves. Outside, durable steel stairways with handrails help prevent slips and falls. Loading docks at the rear of the trailers allow access by forklift.

UniTech's mobile supply store is changing the way our customers do business, as more and more are taking advantage of this unique service offering. We are proud to announce that our mobile supply store is now available for our Department of Energy customers. UniTech will deliver a custom supply warehouse on wheels directly to your site, making it a perfect solution for multi-year projects that require constant access to consumables. ■■

Mobile Supply Store (continued from page 1)

nuclear, natural gas, hydro, wind, and solar energy. Constellation uses UniTech's mobile supply store to stay prepared for service outages, keeping them stocked with supplies and prepared to respond at a moment's notice.

"I don't know why everyone is not using these," said Chris Baker, Chief Contamination Officer for the Dresden Generating Station at Constellation Energy, as he discusses the cost savings and operations efficiency that Constellation has had since implementing the mobile supply store.

"I don't know why everyone is not using UniTech's mobile supply store."

Baker estimates that Constellation saves between \$70,000 and \$90,000 per outage by having the mobile supply store stocked and ready to respond. Through the detailed inventory control system, Constellation is able to pay only for the products used, quickly restock products to maintain supply levels, easily assess product usage, and make informed ordering decisions.

"Thanks to the mobile supply store, we have an outage-worth of supplies on hand at all times," said Baker. "The inventory control system helps us operate more intelligently and efficiently, allowing us to restock the products we use and not pay for those we don't."

Saving Time, Money, and Space with UniTech's Mobile Supply Store

UniTech's mobile supply store is proving to be a game-changer for customers.

The mobile supply store is a warehouse on wheels, uniquely stocked to meet customers needs for one-stop shopping: HP supplies, respiratory protection, first aid kits, safety clothing, fall protection, consumables, and other items.

"So many customers are now taking advantage of our new mobile supply stores," said Shannon Fitzgerald, Technical Account Manager for UniTech Services Group. "These mobile stores are a groundbreaking service offering that is helping customers across the country have access to the products they need while saving time and money."

There is no "one size fits all." Our stocked semi-trailers are fully customizable. Clients can decide which products to stock and how much they need, making the mobile supply store a perfect option for short-term, project-based work or for customers who need a more permanent solution. The entire stock is bar-coded, and each trailer has a "map," allowing clients to quickly locate the products they need.

Our adjustable racking system offers more than 1,300 square feet of product space. Nine-foot ceilings also provide an extended storage area and allow customers to move with ease. These features, along with enhanced lighting, give our clients the feeling they are shopping in their own private, spacious stores.

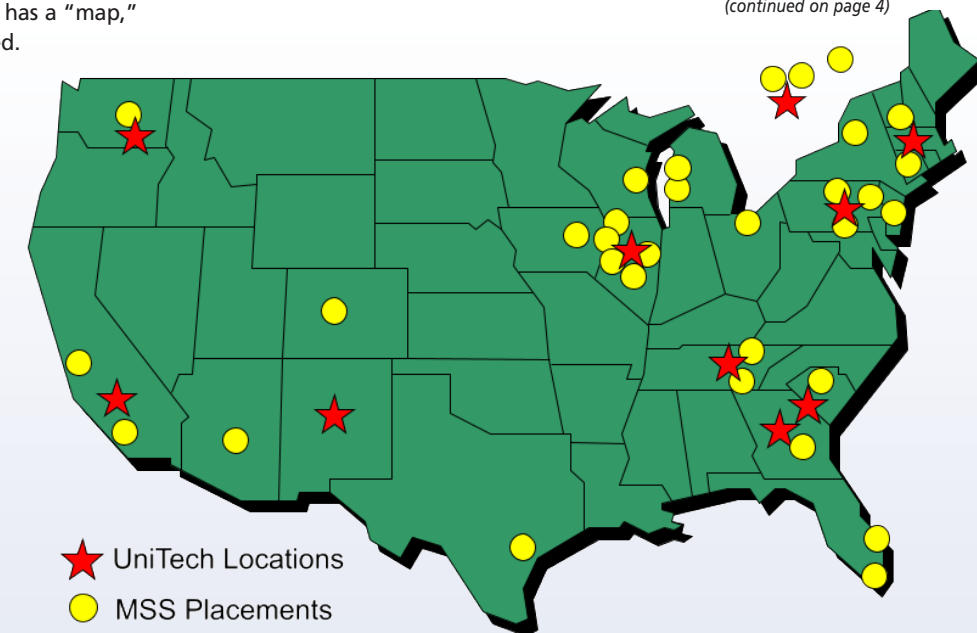

When it's time to reorder, our Just in Time (JIT) inventory tool simplifies the process. The mobile supply store's computerized inventory system ensures appropriate levels of supplies are available to the customer at all times. It's also cost-efficient. Clients can receive separate billing, based on departmental needs and usage.

Constellation Energy is the nation's top producer of carbon-free energy, providing 10% of the country's carbon-free electricity through

ISO 9001

Quality Standards

ISO 9001 standards require that Unitech provides products and services that meet customer and applicable statutory and regulatory requirements, enhancing customer satisfaction through effective application of the quality system.

ISO 14001

Environmental Standards

Known as an Environmental Management System (EMS), the ISO 14001 ensures Unitech remains a good steward of the environment, limiting the impact of operations on flora and fauna.

ISO Audit Season at Unitech

QA Update

Unitech Services Group is proud to be certified by the International Organization for Standardization (ISO) for both quality and environmental standards.

ISO certifications are a standard-bearer, instilling confidence among customers and stakeholders that Unitech operates efficiently and to a high standard. These certifications show our commitment to quality, customer satisfaction, and environmental protection.

After conducting virtual recertification audits of Unitech's Springfield, Richland, Ontario, and Corporate locations in 2021, in-person audits have returned to Unitech locations for 2022. Thus far, Unitech's ISO registrar ISOQAR has conducted on-site recertification audits at our Barnwell, Oak Ridge Laundry, and Corporate locations.

This spring, the Unitech Oak Ridge Service Center had its initial certification audit. The two-day audit consisted of in-depth quality and environmental reviews of documentation, processes, and leadership.

All audited Unitech locations demonstrated the ability, through their quality management system, to consistently provide products and services that meet customer and regulatory requirements and enhance customer satisfaction. Audited Unitech locations also demonstrated their adherence to the ISO 14001:2015 environmental standard.

The high marks on yet another round of ISO audits demonstrate Unitech's continued focus on quality, customer service, and environmental protection. Customers, partners, and employees can rest easy knowing that Unitech has systems and processes in place to consistently deliver high-quality products and services. ■■

Unitech-nology Innovations

Changing and Improving the Nuclear Industry

Unitech was on hand for the 2022 Radwaste Decommissioning Summit this June in Las Vegas, Nevada. As part of a panel discussion on technology innovations, Business Development Manager Kevin Bumpus took the stage dressed in personal protective equipment to showcase how Unitech's technology is changing and improving the way that the nuclear industry performs high hazard work and cleanup missions.

With Unitech's latest product offering—the 3M™ Versaflo™ TR-600 respiratory system—workers can focus on work and not their protective equipment. The Versaflo™ system is engineered for versatility and customization, allowing Unitech to build a custom system that meeting all safety requirements through a wide range of headgear, breathing tubes, and blower units. The units are fully submersible, allowing for full cleaning and decontamination after each use.

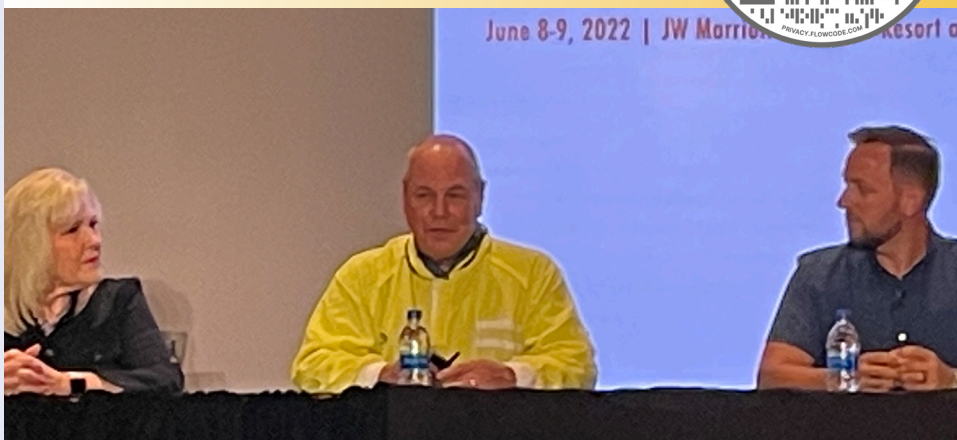

Unitech pairs this state-of-the-art respiratory system with our proven line of ProTech Plus® apparel, offering optimal protection and comfort for your workers while providing cost savings through its durability and long-life span. Workers prefer ProTech 4 to 1 because its comfort is unmatched. This lightweight fabric exhibits excellent air permeability and virtually no insulative or vapor resistance. Passive built-in venting reduces heat stress and maximizes worker comfort.

The Versaflo™ system and ProTech Plus® apparel can be combined with Unitech's proprietary gloves and shoes for a full protective dressout. The gloves are designed to prevent slippage and wrist contamination and shoes feature anti-skid bottoms and adjustable top closures. All items are color coded to ensure proper sizing and easy, efficient sorting.

Speak with your Unitech sales representative about the best options for your needs. ■■

SUPPLIER DIVERSITY SPOTLIGHT

The Michael Dunn Center provides high quality care and support services to children and adults with developmental disabilities through early childhood intervention, family residential and day habilitation, conservatorship assistance, medical support, and physical and occupational therapy. With opportunities for learning, living, working, and playing, the Michael Dunn Center empowers individuals with disabilities and challenges to gain independence.

In business for more than 30 years, the Michael Dunn Center hosts a 22,200 square feet production facility in eastern Tennessee where workers offer a wide range of labor intensive subcontract work in the area of assembly, collating, inspection, packaging, recycling, sewing, shredding, and laundry services.

The Michael Dunn Center also provides workers with off-site opportunities, performing industrial assembly, janitorial, landscaping, and curbside recycling and trash pickup services. The center has contracts with the Department of Defense, Department of Energy, local counties and colleges, and major industry partners, including Unitech Services Group.

Unitech is proud to partner with the Michael Dunn Center, which supplies cargo nets and fills several contract services positions in our Oak Ridge, Tennessee facilities.

"Our workers are reliable, motivated and personable employees who just want the opportunity to work hard and earn a paycheck," said Mary Ann Rymer, Assistant Director of Work Programs for the Michael Dunn Center. "We are so appreciative that Unitech sees their value and partners with us to help enrich the lives of so many of the individuals we serve." ■■

Unitech Staff Spotlight

John Parnau: Leadership and Service

Serving others is a fundamental part of John Parnau's life. Immediately following high school, John joined the United States Marine Corps and served our country honorably for four years. Since that time, John has spent his career serving customers and employees.

John first joined the Unitech team as a production manager in 2011 and has served in various roles and leadership positions throughout his tenure. In 2020, John was selected to serve as General Manager at Unitech's Richland, Washington facility.

As General Manager and Lead Radiation Safety Officer, John is in charge of overall operations, a task he doesn't take lightly. From ensuring the safety of employees and the plant itself, to hiring, shipping, and overseeing personnel issues, John is hands-on in all aspects of the Richland facility.

While John's duties involve many moving parts and oversight, his favorite part of the job is personal.

"I love to problem-solve," John says. "Every day, I work to remove obstacles for our customers and employees. Having the opportunity to help others is the most satisfying part of my job."

Outside of work, John focuses on his other passion: the guitar. An enthusiastic player, John loves the creative process of writing his own songs. When he's not working or strumming his guitar, you're likely to find John spending time with his wife, two daughters, and three granddaughters.

Unitech is proud to spotlight John's leadership and service. We appreciate your contributions to our organization. ■■

Words of Wisdom

"Nuclear energy is not just a clean energy source, but a source of capacity and resiliency."
